manufacturing. Modified xylanase exhibiting increased thermostability and alkalophilicity useful for industrial processing e.g. for pulp

Disclosure; Page 83-84; 109pp; English.

The present invention relates to a modified xylanase exhibiting increased thermostability and alkalophilicity. Modified xylanase is useful in industrial process such as pulp manufacturing. Modified xylanase is also useful for bleaching of pulp, processing of precision devices and improving digestibility of poultry and swine feed. Modified xylanase has improved performance at conditions of high temperature and pH and exhibits improved thermophilicity and/or alkalophilicity in comparison to corresponding native xylanase. The present sequence is Thermomyces corresponding native xylanase. lanuginosus xylanase, Xyn

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Xylanase; Thermomyces lanuginosus strain DSM 4109; Humicola; Thermoascus; Chaetomium; Mucor; Talaromyces; Malbranchea; Myceliophthora; Thielavia; Byssochlamus; Paecilomyces; animal feed additive; in-vivo breakdown; plant cell wall; growth rate; feed conversion.
                                                                                                                                                                                   monocomponent xylanase preparations of the invention. The xylanase preparations and the recombinant Thermonges xylanase are useful as animal feed additives, which promote in-vivo breakdown of plant cell wall material and thus improve digestibility, growth rate and/or feed
                                                                                                                                                                                                                                                                                         This sequence represents the Xylanase from Thermomyces lanuginosus strain DSM 4109. This Xylanase, and Xylanases derived from Humicola, Thermoascus, Chaetomium, Mucor, Talaromyces, Malbranchea, Myceliophthora, Thielavia, Byssochlamus or Paecilomyces strains can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fungal xylanase prepns. for use as animal feed additives - construct for producing recombinant Thermomyces xylanase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-MAY-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW01112;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAW01112 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                          The sequence represents an endo-1,4-beta-D-xylanase from Thermomyces lanuginosus (Humicola lanuginosa), which may be used as a breadimproving additive. The enzyme may be expressed recombinantly from a plasmid pyES2.0 vector in Saccharomyces cerevisiae DSM 10133 (claimed), and may be added to flour at 5-5,000 (preferably 20-2,000) FXU/kg flour, optionally along with other enzymes (amplase, maltogenase, lipase, cellulase, hemicellulase, pentosanase, glucose-oxidase, laccase, protease and/or peroxidase). The enzyme combines particularly well with amylolytic enzymes, and may be used to improve baking properties of flour and/or dough, by increasing volume and improving texture, flavour, crumb softness, freshness and anti-staling properties, while improving dough machinability and stability.                                                                    The present sequence is the protein sequence of a thermostable xylanase of Thermomyces lanuginosus. The xylanase has a melting temperature (Tm) of 75.0 degrees C at pH 7.0. It is preferred for use in a claimed composition of the invention, which comprises at least 2 thermostable enzymes selected from an endoglucanase, xylanase, phytase, protease, galactanase, mannanase, deaxtranase and alpha-galactosidase. The composition is useful for improving the nutritional value of animal feeds, especially those containing soys, wheat, barley, oats and/or rye

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                              which comprises preparing a mash in the presence of enzyme activities (comprising a xylanase of GH family 10 at at least 15% w/w of the total xylanase and endoglucanase enzyme protein) and filtering (A) to obtain a wort. Also described is a composition is useful for reducing the viscosity of an aqueous solution comprising a starch hydrolysate, which is a mash for beer making or a feed composition. The process is useful for the production of an alcoholic beverage, such as beer or whiskey and the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is useful in the mashing and filtration steep in brewing the composition is the mashing and filtration steep in brewing the composition is the mashing and filtration steep in brewing the composition is the mashing and filtration steep in brewing the composition is the mashing and filtration steep in brewing the composition is the mashing and the composition is the composition of the composition is the composition of the composition o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a process for preparing a mash (A) (having enhanced filterability and/or improved extract yield after filtration)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Preparation of a mash (having enhanced filterability and/or improved extract yield after filtration) comprises preparing a mash in the presence of enzyme activities comprising xylanase of GH family 10 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2005-458778/46.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          17-DEC-2004; 2004WO-DK000880
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-SEP-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AEB00305;

                                                                                                                                                                                 The present sequence is given in a specification relating to non naturally occurring xylanase activity (XA) proteins. The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp
                                                                                                                                                                                                                                                                                                                   Non naturally occurring XA protein with enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring Bacillus circulans xylanase is used in an agent for bleaching pulp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bleaching
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAB48543 standard; protein; 194

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                             8
                                                                  Matches
                                                                                               Query Match
                                                                                                                                                              activity (XA) protein comprising an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase, where the protein has been modified to exhibit enhanced thermophilicity, and has been modified to exhibit relative to naturally occurring B. circulans xylanase, and has at least 5 amino acid substitutions. A bleaching agent comprising a modified xylanase is useful for bleaching pulp, in the bioconversion of lignocellulosic materials to fuels, for clarifying juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. improving the quality of dough, helping bread to rise and processing of wheat and corn for starch production, use as animal food additives to aid in the digestibility of feedstuffs and in the washing of super precision devices and semiconductors. The present sequence is a xylanase protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Xylanase activity; enzyme; thermostable; xylanase; pulp bleaching;
liquid clarification; coffee extraction; plant oil extraction;
starch extraction; food thickener; animal food additive; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a non-naturally occurring xylanase activity (XA) protein comprising an amino acid sequence less than 9
                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Fig 16L; 121pp; English.

                                                                                                                                                                                                                                                                                                                  The invention relates to a mutant xylanase activity (XA, endo-1,4-beta xylanase from Bacillus circulans) protein appearing as ADI66730. Also included is a blaaching agent comprising the XA protein. The nonnaturally occurring XA protein comprises at least four amino acid substitutions as compared to Bacillus circulans xylanase ADI66728. The amino acid substitutions are made at positions 26, 28, 30, 53, 58, 64, 79, 105, 142, 144, 171, 176, 180 or 182, especially at positions 28, 30, 58, or 144. The non-naturally occurring xylanase activity (XA) protein is also useful for bleaching pulp in the paper and related industries, but is also useful in the food and animal feed industries. The new protein is active at higher pH and temperature ranges than naturally occurring xylanases, simplifying incorporation of the xylanase treatment step into pulp processing, especially where the enzyme is added after hot alkali treatment. The present sequence is a xylanase from another species inclinated inclinate from another species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New mutant xylanase (XA) protein comprising at least four amino acid substitutions as compared to Bacillus circulans xylanase, useful for bleaching (paper) pulp, and in the food and animal feed industries.
                                                                                                                                                                                                                                       Sequence 194
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; SEQ ID NO 24; 84pp; English.

The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Non naturally occurring XA protein with enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring Bacillus circulans xylanase is used in an agent for bleaching pulp.

                                                                                                                                                                                                                                                                                                                                                                                                                                   alkalophilicity, or thermostability relative to naturally occurring B. circulans xylanase, and has at least 5 amino acid substitutions. A bleaching agent comprising a modified xylanase is useful for bleaching pulp, in the bioconversion of lignocellulosic materials to fuels, for clarifying juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. improving the quality of dough, helping bread to rise and processing of wheat and corn for starch production, use as animal food additives to aid in the digestibility of feedstuffs and in the washing of super precision devices and semiconductors. The present sequence is a xylanase protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a non-naturally occurring xylanase activity (XA) protein comprising an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase, where the protein has been modified to exhibit enhanced thermophilicity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Xylanase activity; enzyme; thermostable; xylanase; pulp bleaching;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 11
                                              The invention relates to a mutant xylanase activity (XA, endo-1,4-beta xylanase from Bacillus circulans) protein appearing as ADI66730. Also included is a bleaching agent comprising the XA protein. The nonnaturally occurring XA protein comprises at least four amino acid substitutions as compared to Bacillus circulans xylanase ADI66728. The amino acid substitutions are made at positions 26, 28, 30, 53, 58, 64, 79, 105, 142, 144, 171, 176, 180 or 182, especially at positions 28, 30, 58, 67, 194. The non-naturally occurring xylanase activity (XA) protein is useful for bleaching pulp in the paper and related industries, but is also useful in the food and animal feed industries. The new protein is active at higher pH and temperature ranges than naturally occurring xylanases, simplifying incorporation of the xylanase treatment step into pulp processing, especially where the enzyme is added after hot alkali treatment. The present sequence is a xylanase from another species

The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        identical to a naturally occurring Bacillus circulans xylanase, where the protein has been modified to exhibit enhanced thermophilicity, alkalophilicity, or thermostability relative to naturally occurring B. circulans xylanase, and has at least 5 amino acid substitutions. A bleaching agent comprising a modified xylanase is useful for bleaching pulp, in the bioconversion of lignocellulosic materials to fuels, for clarifying juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. improving the quality of dough, helping bread to rise and processing of wheat and corn for starch production, use as animal food additives to aid in the digestibility of feedstuffs and in the washing of super precision devices and semiconductors. The present sequence is a xylanase protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a non-naturally occurring xylanase activity (XA) protein comprising an amino acid sequence less than 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Fig 16Q; 121pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a mutant xylanase activity (XA, endo-1,4-beta xylanase from Bacillus circulans) protein appearing as ADI66730. Also included is a bleaching agent comprises at least four amino acid substitutions as compared to Bacillus circulans xylanase ADI66732. The amino acid substitutions are made at positions 26, 28, 30, 53, 58, 64, 79, 105, 142, 144, 171, 176, 180 or 182, especially at positions 28, 30, 58, 67, 194. The non-naturally occurring xylanase activity (XA) protein is also useful for bleaching pulp in the paper and related industries, but is also useful in the food and animal feed industries. The new protein is active at higher pH and temperature ranges than naturally occurring xylanases, simplifying incorporation of the xylanase treatment step into pulp processing, especially where the enzyme is added after hot alkali treatment. The present sequence is a xylanase from another species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New mutant xylanase (XA) protein comprising at least four amino acid substitutions as compared to Bacillus circulans xylanase, useful for bleaching (paper) pulp, and in the food and animal feed industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            paper

                                                                                                                                                                                        AAM60728-44 represent family 11 xylanases. The specication describes a method for modifying a Family 11 xylanase to improve its thermophilicity, alkalophilicity and or thermotolerance. This method comprises modification of amino acids 10, 27 or 29 of Trichoderma reesei xylanase II or corresponding aligned amino acids of another Family 11 xylanase, replacement of one or more amino acid sequences in the N-terminal region with corresponding aligned sequences from another Family 11 xylanase to form a chimeric xylanase and/or upstream extension of the N terminus by addition of upto 10 amino acids. The modified xylanses are useful for improving the bleachability of wood pulp by treatment at 55-75 degrees celsius and pH 7.5-9.0 for 5-180 minutes. They might also be useful as digestibility-improving animal feed additives. They might also be useful in the processing of wheat or maize for starch production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pamily 11 xylanase; improve; thermophilicity; alkalophilicity;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               B B

endo-1,4-beta-xylanase (EC 3.2.1.8) A -

bracket fungus (Schizophyllum commune)

```
A;Description: catalyzes the hydrolysis of 1,4-beta-xylosidic bonds in xylans A;Pathway: xylan degradation C;Superfamily: endo-1,4-beta-xylanase; endo-1,4-beta-xylanase homology C;Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degration endo-1,4-beta-xylanase homology cxYL- F;12-197/Domain: endo-1,4-beta-xylanase homology cxYL- F;12-197/Domain: endo-1,4-beta-xylanase homology cxYL- F;11-160/Disulfide bonds: #status experimental
